MAWSS Awards Contract to Repair Spanish Fort Water Line

Mobile Area Water and Sewer System (MAWSS) today awarded a \$3,071,089 contract to Construction Labor Services (CLS) to repair the segment of water main serving Spanish Fort that broke New Year's Day. The action was taken during a special meeting. A temporary above ground bypass pipe is currently providing service to Spanish Fort including several restaurants, and about 30 customers of Spanish Fort Water, located east of the Chocolatta Bay boat ramps.

Early New Year's Day, a segment of HDPE plastic pipe line serving the eastern section of the Causeway broke, leaving customers without water until emergency service was restored that evening. The repair, which requires a deep bore under the river, replaces the HDPE pipe with ductile iron pipe. Work should begin by the first week of May with completion expected in July.
