

DOMESTIC WATER SERVICE  
(May be combined with Fire Line)

rev 7/28/2016

Form - MC4706

I understand that a backflow prevention device will be required in order to prevent any possibility of contaminated water from entering the public water supply line and it will be installed in accordance with MAWSS' Policies, Standards and Specifications, a copy of which can be obtained from MAWSS' website (www.mawss.com). I will install the type of backflow preventer depending on the degree of hazard for this project. All plumbing shall conform to the plumbing code of the City of Mobile even though this site may be outside of the city limits.

Once the backflow preventer installation has been completed, contact our Cross Connection Control Division (694-3463) for MAWSS' initial inspection and device testing. The backflow preventer shall be maintained and tested annually at the user's expense to ensure proper functionality. Test results shall be furnished to MAWSS, annually, if tested by parties other than MAWSS.

If I do not call for inspection within a reasonable amount of time MAWSS may interrupt this service connection which will require my paying a service fee for reinstatement.
