## **MAWSS Releases Hydrant Flushing Routes for February & March**

Mobile, AL – Mobile Area Water & Sewer System will flush fire hydrants in parts of West Mobile beginning Wednesday, February 1, 2023 through the end of March. Hydrant flushing is performed for maintenance purposes to remove sediment from pipes in order to maintain clarity and quality in the distribution pipes. During the flushing process, our customers may experience fluctuations in pressure and discolored water. Although the water does not pose a health risk, it is recommended to avoid drinking the water until it runs clear. It is fine to use the water for showering, bathing, and toilet flushing. Do not use immediately after flushing or your laundry could be discolored.

If you notice discolored water after flushing, turn on several cold water taps in your home to allow new water to work its way into your pipes. Let the water run for several minutes until the discoloration is gone and the water runs clear. In some infrequent cases, customers may experience slight discoloration for a few hours. This discoloration only affects the appearance of the water; it does not affect the water quality or taste. If discoloration continues, please contact our customer care team at (251) 694-6135
