**Sanitary Sewer Overflow
21 Florida St. N.**

Mobile Area Water & Sewer System (MAWSS) responded to a sanitary sewer overflow on March 26, from a sewer mainline at 21 Florida St. N. Approximately 1200 gallons of wastewater overflowed as a result of a break and grease blockage on the main line. The wastewater was reclaimed; no sewer reached US waters. MAWSS crews have cleared the blockage and repaired the break. Steps will be taken to prevent future overflows at this location.

Grease blockages occur when foods containing fats, oil or grease are put down the drain. MAWSS provides free containers for grease recycling. To learn more visit www.itseasytobeungreasy.com.
