**Grease Leads To Wastewater Overflow  
2458 Old Shell Rd.**

Mobile Area Water & Sewer System (MAWSS) responded to a wastewater overflow on December 1, 2022 from a manhole at 2458 Old Shell Rd. Approximately 300 gallons of wastewater overflowed into Three Mile Creek as a result of heavy grease blockage on the main line. MAWSS crews have cleared the blockage. Steps will be taken to prevent future overflows at this location.

Grease blockages occur when foods containing fats, oil or grease are put down the drain. MAWSS provides free containers for grease recycling. To learn more visit [www.itseasytobeungreasy.com](http://www.itseasytobeungreasy.com).
